PRAVEEN KOPPAD

TECHNICAL SUPPORT ENGINEER

L2/L3 Production Support | Fintech & Payments

koppad.praveen100@gmail.com | +91 9008002014 | Bengaluru, India

GitHub: github.com/praveenkoppad916-hue | Portfolio: praveenkoppad916-hue.github.io

PROFESSIONAL SUMMARY

Technical Support Engineer with **4.5+ years** of L2/L3 production support on enterprise SaaS and fintech payment platforms. Proven in **P1/P2 incident management**, **SQL and REST API troubleshooting**, **Kibana log analysis** and **root cause analysis (RCA)**, with **consistent SLA delivery** and close partnership with Engineering and DevOps. Builds SOPs, automation and reproducible hands-on labs that cut manual effort and speed up team onboarding.

KEY ACHIEVEMENTS

370+	100%	90%	30+
Tickets resolved	SLA compliance	Manual work removed via Jenkins	P1/P2 incidents handled

CORE TECHNICAL SKILLS

Production Support & Incident Management: L2/L3 Triage · P1/P2 Incident Response · Root Cause Analysis (RCA) · SLA Management · ITIL · Technical Escalations · 24×7 Operations · SOPs & Runbooks

SQL, Databases & APIs: SQL Query Analysis · Data Validation · Transaction Lifecycle Investigation · REST API Troubleshooting · Postman · JSON · HTTP Response Analysis

Monitoring, Logging & Observability: Kibana · Elasticsearch (Lab) · OpenSearch · Grafana · Kafka · Log Analysis · Log Correlation · Transaction-ID Tracing · HTTP 4xx/5xx Investigation · Metabase · Superset

Linux, Automation & DevOps: Linux / Unix · Bash · Python · Jenkins · Git · GitHub Actions · Docker (Lab) · CI/CD Troubleshooting · Application Log Analysis

Tools & Collaboration: Jira · Confluence · Incident Documentation · Engineering/DevOps Coordination · Customer Communication · Technical Knowledge Transfer

PROFESSIONAL EXPERIENCE

ZETA | Technical Support Engineer: Optum & Pluxee — Jul 2025 – Present

OPTUM PROGRAM

- Technical SME and primary escalation point; resolved **173+ production tickets with consistent SLA delivery** by investigating SQL records, REST API responses, transaction IDs and application logs.
- Managed **20+ P1/P2 incidents** and authored **10+ RCAs**; correlated investigation evidence, documented findings and coordinated Engineering/DevOps escalations during **24×7** support.
- Investigated payment and application failures by tracing transaction lifecycles across database records, API responses and logs; supplied reproducible findings for engineering-level resolution.
- Contributed to **two Jenkins automation initiatives** that saved **~6 hours per week** and removed **90% of manual work**.
- Wrote **15+ SOPs and runbooks** that standardise troubleshooting and incident handling, improving operational efficiency by **60%** and helping onboard new joiners.
- Owned technical **knowledge transfer** for new joiners and cross-functional teams, explaining investigation workflows, escalation evidence and repeatable troubleshooting procedures.
- Independently built a **full-year shift roster** for a seven-member support team during the lead's absence, keeping round-the-clock coverage on track.

PLUXEE PROGRAM

- Resolved **200+ tickets with consistent SLA delivery**, including high-volume service requests such as phone number and email updates and card merges, closed in **~3 hours on average**.
- Supported **10+ P1/P2 incidents** and coordinated ticket assignment and incident response across the team.
- Created **5+ SOPs** documenting recurring requests and resolution steps.

VSM INFOTECH PVT. LTD. | Application / Technical Support Engineer — Apr 2022 – Jun 2025

- Delivered L1/L2 enterprise application support, investigating **SQL, Linux/Unix, REST API** and backend application issues; resolved **200+ tickets with consistent SLA delivery** and managed escalations against SLAs.
- Supported **~10 customer onboardings per month** and managed cases against SLAs.
- Reproduced reported defects and escalated them to engineering for resolution.

PROJECTS: PRODUCTION-SUPPORT LABS

Self-built, reproducible labs using synthetic data to mirror real L2/L3 support workflows.

Kibana & Elasticsearch: Production Log Investigation — View on GitHub ›

Docker · KQL · Query DSL

- Imported synthetic fintech logs into a local Elasticsearch/Kibana lab.
- Verified 4 events for transaction TXN-100245 and documented the incident RCA.

Jenkins CI/CD: Deployment Troubleshooting — View on GitHub ›

Jenkins · Docker · GitHub Actions

- Created four reproducible pipeline failure labs covering health checks, JavaScript validation, npm dependencies and Docker image resolution.

SQL Troubleshooting: Payment Incident Analysis — View on GitHub ›

SQLite · Python · GitHub Actions

- Built fictional payment investigations for failures, duplicate references and SLA issues.
- Added automated tests and incident runbooks.

Linux / Unix: Production Support Lab — View on GitHub ›

Ubuntu · Docker · Bash

- Automated analysis of synthetic payment logs.
- Identified HTTP 500/504 events and correlated the affected transactions.

ACADEMIC ENGINEERING PROJECTS

Autonomous Planetary Rover: Path Planning | *Robotics · Path Planning · Python / MATLAB* — View on GitHub ›

MSc project on autonomous rover navigation, obstacle-aware route planning and simulation.

Automated Agricultural Pesticide Sprayer | *Mechanical Design · Agricultural Automation* — View on GitHub ›

Bachelor's project on automated spraying principles and agricultural process efficiency.

EDUCATION

MSc, Mechatronics Systems Engineering | Kingston University London — 2020 – 2022

B.E., Mechanical Engineering | BLDEA — 2015 – 2019
